

Phil Baker

Solutions Guy, Support Guru, and the One You Call First
a.k.a. VP of Engineering, Rafter Equipment Company

ABOUT ME

Phil brings nearly three decades of hands-on experience across design, controls, service and engineering leadership. He combines deep technical expertise with a practical, customer-first approach to problem-solving.

BIO

Phil Baker serves as Vice President of Engineering and Customer Support at Rafter Equipment Company, bringing nearly three decades of hands-on experience in roll forming, tube mill equipment and industrial systems support.

Phil began his career as a Mechanical Draftsman and steadily advanced through roles including Controls Designer, Electrical and Mechanical Service Technician, Engineering Manager and Network Administrator for industrial controls. This progression has given him a rare, end-to-end perspective on both how equipment is built and how it performs in the field - making him a trusted problem-solver for customers and colleagues alike.

Today, Phil leads Rafter's engineering and customer support teams with a focus on reliability, responsiveness and long-term customer partnerships. Known for his ability to bridge technical depth with real-world application, he is equally comfortable troubleshooting on the shop floor or designing solutions behind a screen. His leadership reflects Rafter's commitment to craftsmanship, innovation and standing behind the equipment long after it ships.

Phil studied computer science at Cuyahoga Community College. Outside of work, he is a dedicated family man, a loyal teammate, and a natural mentor - values that shape his people-first approach to engineering and support.
